

Median: Managing your time through different timezones

by HuiShan Chen, Fan Huang, Tonmoy Rajkhowa, Neha Tomar

Design for Emergency
Seed ideas

Manage median time for your distant daily routine.

The idea is based on students and workers who are quarantined at home after the countries were locked down. Some people decided to go back to their country, some people decided to stay. During the quarantine life, they lost their normal daily routine, social life, and entertainment, etc and is separated from their families and work in different timezones.

Time management is an important task for people nowadays no matter where you are. Due to the pandemic, people are forced to have remote classes, distant meetings, remote working, etc. Staying at home for a while, people would lack motivation and lose their self-management ability gradually.

Building up your daily routine through this platform is not only can help you arrange your distant meeting in a different location but also can manage your time more effectively, friendly, and appropriately with your family and work colleagues.

WHOM IS IT FOR?

The main users are the people who are doing distant learning/working in different timezones away from their family/workplace and have difficulties to maintain their daily routine.

WHY IS IT RELEVANT?

The idea is based upon many students and workers who are forced to quarantine at home because of the pandemic, and some of them are separated in different timezones away from their family and workplace. The platform will help the user manage the routine more effectively for the rest of the day and help them schedule professional and family meeting time that will help them balance the best of both worlds, which is family activities and working meetups.

WHAT IS NEEDED TO IMPLEMENT THE IDEA?

Google Maps APIs
Data Platforms
Web / Mobile Apps

WHO CAN CONTRIBUTE?

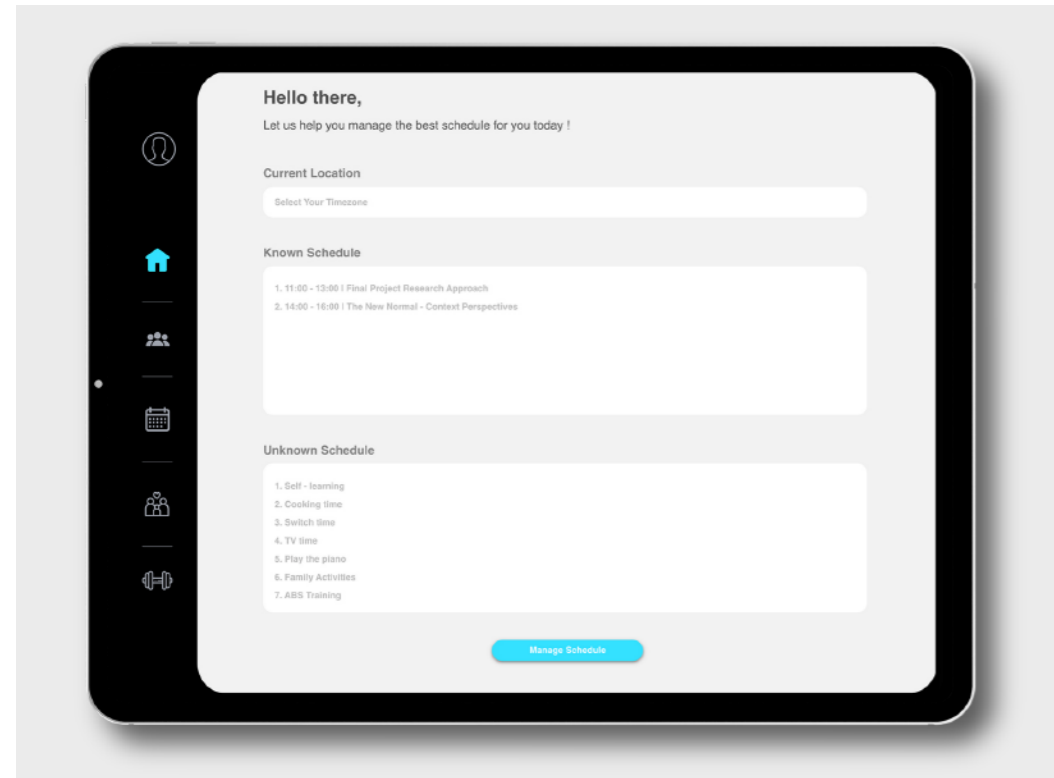

UI / UX designers
Web / Mobile Apps developers

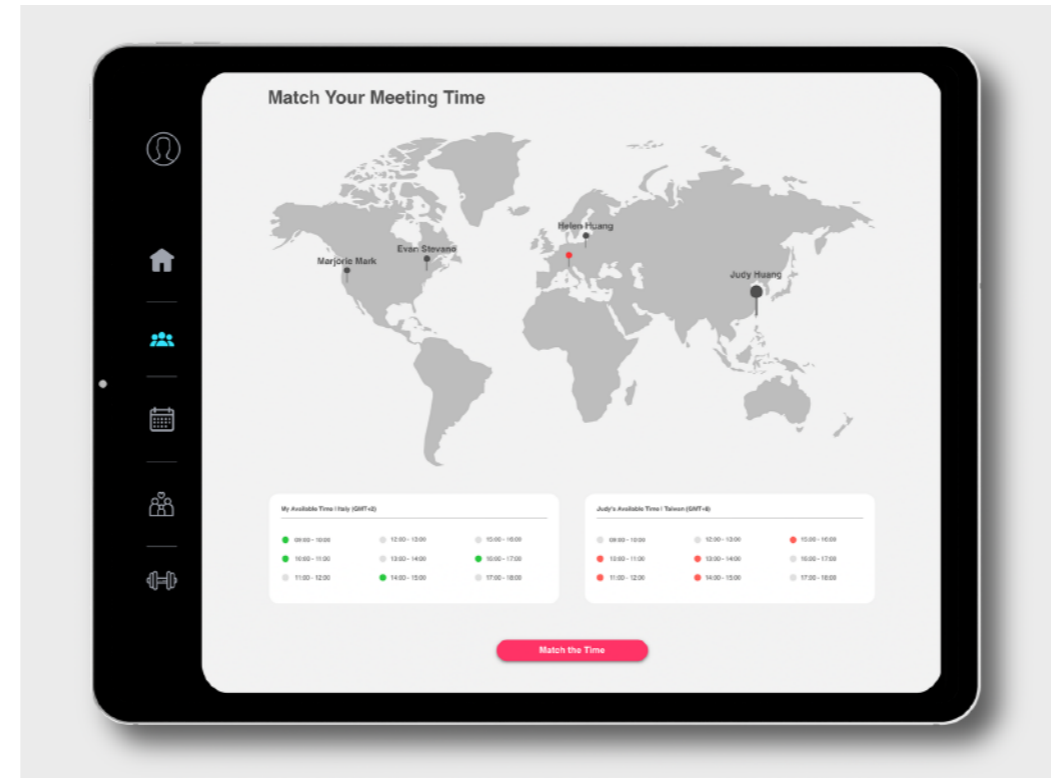

Median: Managing your time through different timezones
